Adobe AUDITION

Adobe Audition offers high-performance, intuitive tools for audio editing, mixing, restoration, and effects. Powerful new features such as real-time clip stretching, automatic speech alignment, and control surface support help you deliver projects faster than ever.

Course Description

Our Adobe Audition course is aimed at people who want to learn the basic skills for audio editing and develop them for professional use such as keeping recored phone records, creating podcasts or sound bites for a company website.

The Audition course is run as a bespoke course, giving you the opportunity to tailor the course to your exact requirements. To provide a start point, we'd recommend you use the suggested outline as a guide. The provided outline takes you though the basics of audio and sound skills you will need for any of the above and is perfect for the vast majority of our clients.

Should you wish to further develop your knowledge, you might be interested in our other Video & 3D Design Courses.

The course runs from 9.30 am to approximately 4.30 pm.
